Healthcare Problems Are Data Problems

Today's healthcare organizations are facing greater pressures, including data interoperability, stringent regulations and security requirements, and more importantly, increasing patient expectations.

Cloud-based technologies are transforming healthcare organizations by playing a pivotal role in helping to relieve these pressures. As a Google Cloud Premier Partner, SADA helps healthcare organizations realize the full potential of their data, working with you to design and implement solutions that leverage key data insights and improve consumer experiences and quality of care.

Why Healthcare Organizations Are Going Google

Google Cloud has a team of healthcare focused engineers and product managers building products around five core areas to meet the needs of healthcare organizations:

- Store, de-identify and aggregate healthcare data to unlock its value while reducing risk.
- Gain insights from your data using advanced analytics tools and platforms.
- Leverage AI/ML to support smarter decision-making.
- Empower healthcare teams with secure collaboration tools.
- Build new tools and services for patients, providers, customers and employees.

All with best-in-class security built in

Google's Cloud-Based Solutions for Healthcare

SADA has expertise in the entire Google Cloud portfolio of products and has helped numerous healthcare organizations achieve digital transformation.

Google Cloud Platform

Securely run your organization on the most advanced cloud platform ever built all while protecting patient identity and data security.

G Suite

Maintain HIPAA compliance and improve patient care while empowering your care teams to collaborate, iterate, and innovate together, from anywhere, in real time.

Healthcare API BETA

Ingest and manage key healthcare data types—including HL7, FHIR and DICOM—with a robust, scalable infrastructure solution that allows you to use that data for analytics and ML in the cloud.

Machine Learning APIs

Make your organization smarter and faster with ML models for any type or amount of data.

Google Maps APIs

Use Google Maps APIs to leverage data in amazing ways.

Chrome

Mobilize your care providers with Chrome devices that deliver security, choice and flexibility.

Accelerate Your Cloud Adoption With SADA

SADA is a multi-year Partner of the Year Award recipient with a certified team of cloud experts to help you transform your healthcare organization. From consulting and migration services to change management and support, SADA prides itself on implementing leading-edge technologies and driving ROI on your cloud investment.

Infrastructure Services

Count on our team of experienced professionals to provide you with flexible, scalable and secure systems so you can focus on innovation.

Cloud Consulting

We provide expert consultative and strategic business services to help you maximize the opportunities and benefits of cloud adoption.

Change Management

Technological changes can challenge your workforce and hinder user adoption. Ensure your transformation is successful with expert enterprise consultants and certified trainers.

Application Development

Our design and development experts build powerful, high-performance applications designed for your customers and business objectives.

Cloud Migrations

SADA will help get your data and applications into the cloud, so they can be securely accessed anywhere, anytime.

Managed Services

Rely on our award-winning IT and Cloud Managed Services to proactively manage, monitor and maintain a secure, disaster-free environment with exceptional support services.

“

Having a good tech advisory partner like SADA helps offset what we have to manage and monitor. It's a great extension for our company. That's what a good partner should be. When partnerships are developed how they should be, it makes our lives easier.
