

A Proposed Rule to Help Patients Access their Health Information

Alexandra Mugge, MPH
Deputy Chief Health Informatics Officer

A lack of seamless data exchange in healthcare...

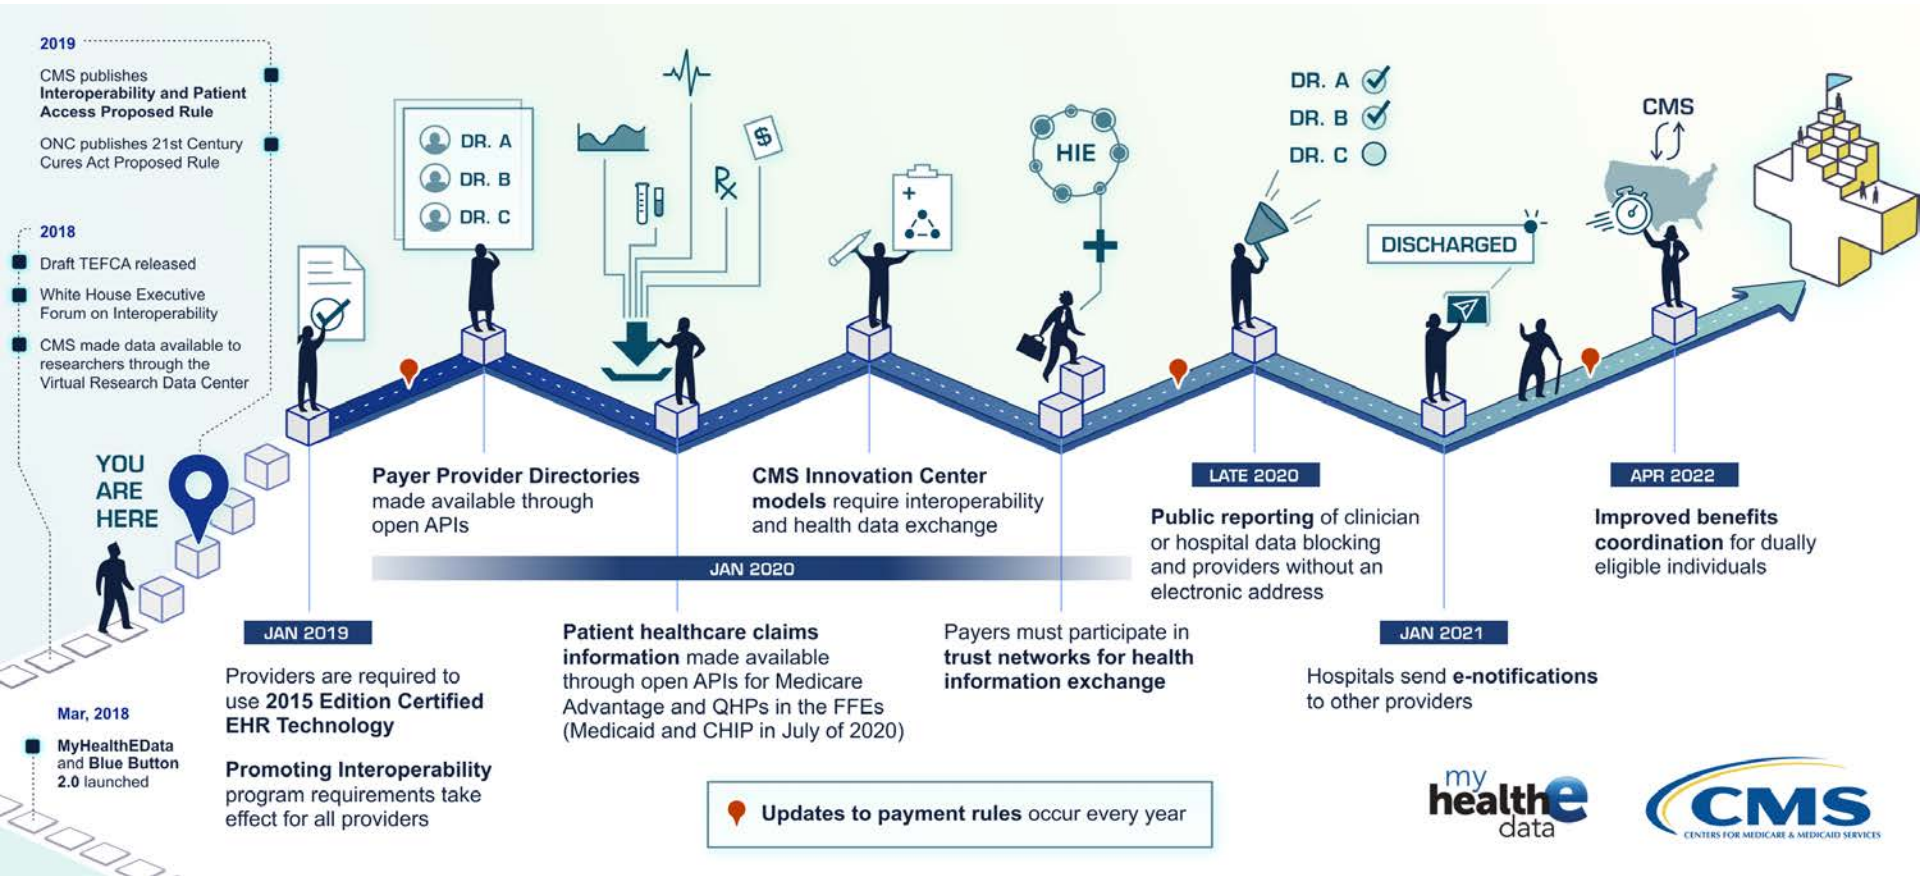

leads to disconnected care, worse health outcomes, and higher costs.

Interoperable healthcare data exchange...

enables coordinated care, improved health outcomes, and reduced cost.

How might we get there?

The proposed rule would lay the foundation for healthcare interoperability.

How might these proposals impact me?

1 I can **easily access my health claims data**, including information about my treatment history and prescriptions.

2 I can easily find an **up-to-date list of providers** in my network.

6 **Better communication** between my providers means I don't fall through the cracks.

3 I can **bring my data with me** when I switch plans or providers.

5 I know which providers are sharing data, and **reports about data blocking** help me choose where to get care.

4 I know my coverage benefits are being **coordinated**.

The proposals would help empower me to take ownership over my health data.

How might these proposals impact me?

1 With **better access to patient data**, I can provide more informed treatment recommendations and help my patients make better care decisions.

2 I know how to **contact other providers** my patient is seeing so we can share information and provide coordinated care.

4 As a participant in **alternative payment models**, I can showcase my commitment to health care interoperability and standards-based data exchange.

3 **E-notifications** that my patients are admitted or discharged keep me in the loop.

The proposals would help me to confidently provide better care to patients.

How might these proposals impact me?

1 **Sharing health information** with patients better engages them and strengthens our relationship.

2 **Historical claims data** helps patients understand their healthcare expenses.

3 **Care Coordination** with other payers helps me provide coverage to get my patients the best outcomes.

5 **Offering a provider directory** through an API helps my patients find the doctors they need.

4 **Trusted exchanges** make it easier for me to communicate with providers.

The proposals would increase my ability to provide more efficient and coordinated coverage.

Comment Period March 4 – May 3
